

DATA SHEET

Trustwave UTM

► SIMPLIFIED MANAGEMENT, INCREASED ROI

BENEFITS

- Save space by deploying multiple security technologies in one appliance
- SpiderLabs Threat Intelligence powered signature database
- Business stays monitored 24x7 by global Advanced Security Operations Centers (ASOCs)
- Manage costs through a single, predictable monthly subscription fee for service and support

Cybersecurity solutions today must cover geographically disparate areas, require deep product knowledge to configure, and need long-time monitoring and management, as well as physical space to deploy them. Trustwave UTM technology offerings seek to simplify these challenges.

TRUSTWAVE UTM

Trustwave UTM offers comprehensive network security with a low total cost of ownership. All hardware costs, maintenance, technology and software updates are included in a single, predictable monthly subscription fee for service and support. No capital expenditure is required. Flexible hardware form factors fit a variety of use cases—Trustwave UTM can be deployed either physically or virtually. Trustwave UTM is compatible across major hypervisor platforms (KVM, Xen, Hyper-V, ESXi) and cloud platforms (AWS/Azure)

The Trustwave UTM provides a comprehensive set of capabilities, including:

- | | |
|--|-----------------------------------|
| • Stateful Firewall | • Web Content Filtering |
| • Virtual Private Networking* | • Network Access Control |
| • Intrusion Detection/Intrusion Prevention | • Internal Vulnerability Scanning |
| • Web & E-mail Anti-Virus | • 4G Cellular backup support |

*VPN not available in Russia

DELIVERED AS A MANAGED SECURITY SERVICE

Managed UTM is one of many cybersecurity technologies offered by Trustwave. The Trustwave UTM excels in a variety of use cases with varying programmatic requirements. By bringing trained cybersecurity experts to the front lines and giving them the best technology and tools, including the ability pull in product development to help solve complex problems, allows Trustwave to simplify your security program without lengthy turnaround times.

When you purchase the service, Trustwave delivers a UTM appliance (physical or virtual) that is provisioned by Trustwave engineers based on your operational needs and constraints. Once the appliance is installed and the configurations are made, Trustwave tests the device to ensure proper operation. From initialization through the software and hardware lifecycle, Trustwave UTM is managed by the 24x7 global network of Trustwave ASOCs that are constantly monitoring for threats and new malware.

As a customer, you always have access to your data and the Trustwave team via the Trustwave TrustKeeper[®] portal where you can view log data, submit change requests, and receive notification of upcoming product improvements and updates.
